Smart Grid

Green Car Solution

Photovoltaic System

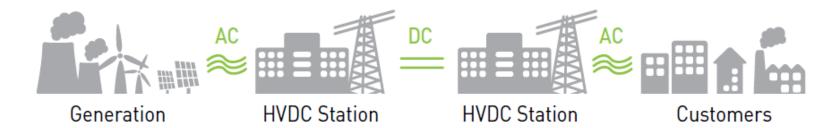

Railway System

HVDC

HVDC system converts AC to DC to transmit long distance and then converts back again to Connect with the AC grid with very low loss

Long Distance Transmission with Lower Cost

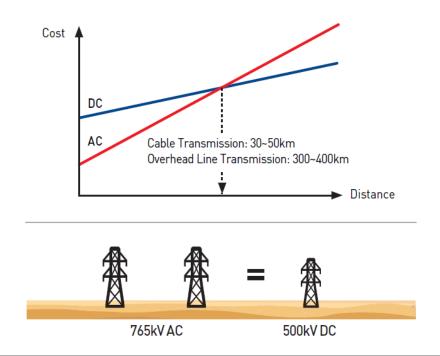

HVDC is the only option for the overhead transmission longer than 300km or submarine/underground 40km thanks to DC characteristics

Eco-friendly Transmission

HVDC system has lower environmental impact because it requires fewer overhead lines comparing to AC system. The technology is also the key component in the future energy system based on renewable energy sources.

Optimal Grid Management

HVDC can directly interconnect load centers with huge energy sources efficiently. Therefore, negative impact on the grid is minimized. HVDC also improves the performance of AC grid by means of additional controllability.
